Highlights

Digital Radio

Digital Radio is, on top of FM analog transmission, a new way of broadcasting radio via a network of terrestrial transmitters. It provides listeners with more choices and information delivered in clear, crackle-free sound quality. The technology allows the receiver to lock on to the strongest signal it can be find. With digital stations there are no frequencies to remember, and sets are tuned by station name, so there is no returning on the move.

Large backlit LCD display

Backlit LCD display ensures easy viewing and operation in low light conditions, and provides clear information at a glance.
